

枚举类型:

```
package Test;

public class AboutEnum {
    public static void main(String[] args) {
        Season spring = Season.SPRING;
        spring.showInfo();

        Season spring1 = Season.SPRING;

        System.out.println(spring1.equals(spring)); // 每次Season.SPRING获得的都是一个对象
    }
}

enum Season implements ITest{ // 枚举类, 等于多个饿汉模式
    SPRING("春天", "春暖花开"),
    SUMMER("夏天", "夏日炎炎"),
    AUTUMN("秋天", "秋高气爽"),
    WINTER("冬天", "寒风凛冽");

    private final String name;
    private final String desc;

    private Season(String name, String desc) {
        this.name = name;
        this.desc = desc;
    }

    public void showInfo() {
        System.out.println(this.name + ":" + this.desc);
    }

    @Override
    public void test(){
        System.out.println("实现了接口的方法");
    }
}

interface ITest{
    void test();
}
```

Annotation(注解)概述:

基本的注解:

@Override

@Deprecated 表示某个程序元素(类、方法)已过时

@SuppressWarnings("抑制编译器警告")

自定义 Annotation:
